

## Introducing Autocat Online, the latest innovative eCatalogue service

We all recognise the importance to your business of readily being able to access your Autocat catalogue. You rely on this data to ensure that you can identify the correct parts for a specific vehicle, and any alternatives that may be available.

But what happens if this becomes unavailable for whatever reason – for example, a power outage or a hardware failure? You face a real dilemma – how can you identify the right parts needed for a specific vehicle to enable you to service the customer requirement right now?

### Autocat access via a browser

**Autocat Online** is a service that is designed to minimise such disruption and to enable you to quickly identify the right parts for the chosen vehicle.

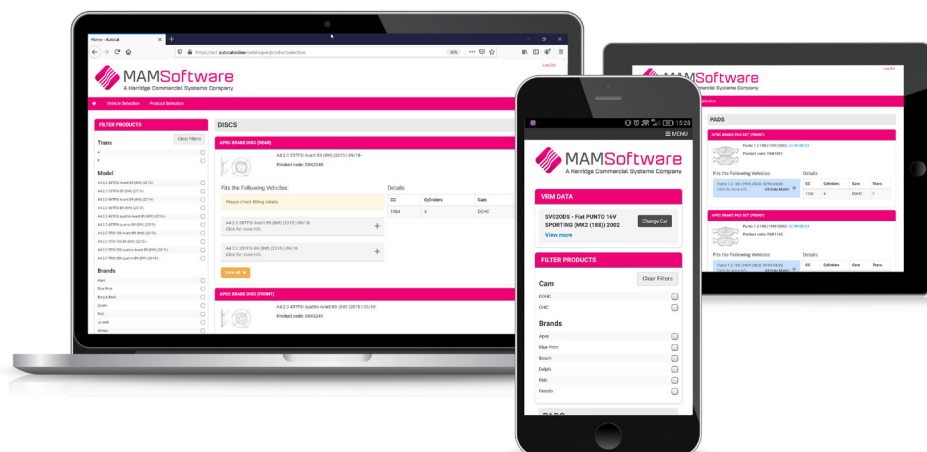

This intuitive solution means that you can get online quickly and satisfy your customer demand.

Accessible via the browser built into your tablet, smartphone or PC, you can get straight to the right parts for the chosen vehicle online. You have full access to VRM lookup, manual lookup and any supplier preferences that you have created within your Autocat system. This enables you to see the same suppliers and part details that you would if you were to start the search from within Autocat, Autopart or Autowork Online.

### Remote access for your sales team

As a cloud-based solution, you can access **Autocat Online** from your tablet or smartphone at any time, making the catalogue available whenever you need it. It's about giving you the access to the catalogue when you need it!

Your sales team may find this solution really useful when they are out with customers, as it provides the ability to quickly and easily identify the correct vehicle parts.

At MAM, we recognise the importance of this key data to your business and want to keep any loss of service that you may experience to a minimum. We take pride in providing our customers with the best available tools to run their business. With **Autocat Online**, you log onto the portal with your own chosen credentials and in a secure environment.

## Data available within Autocat Online

**Autocat Online** gives you access to vehicles and supplier part catalogues, based on the preferences you have already setup in Autocat.

**Note:** that as this service is not designed as an integral component of your Autopart system (after all, this may not be accessible for the reasons outlined above), prices and current stock levels are not available in **Autocat Online**.

We recognise that identifying the right parts as quickly as possible is key to ensuring that you

can quickly satisfy your customer demand and deliver that excellent customer service that keeps you at the top of their supply chain.

## How do I access my Autocat Online?

We will provide you the credentials required for a single user login as part of your Autocat subscription.

In the event of an operational issue with your hardware, a system failure or if you are operating remotely, you can access **Autocat Online** portal via a browser from your device of preference using standard 3G/4G or broadband connectivity.

Once logged in, you can then utilise the VRM lookup or manual vehicle lookup to identify the correct parts for your selected vehicle.

Additional logins can be made available if required. Please contact the MAM Software Support Team to find out more.

AUTOCAT-ONLINE-V2-20-05-2021
